Sir:

Prior to examination, please amend the application as follows:

IN THE CLAIMS

Please add the following new claims:

11. An image processing device comprising

- an input for receiving at least one monocular video input image;
- at least one processor adapted to perform the following operations
 - segmenting at least one foreground object from the input image;
 - applying at least one respective transformation to each segmented object and to the background, for each of a plurality of output images;
 - deriving the plurality of output images from the results of the respective transformations.
